

### Activity—Variations

**Editions used:** Integers

To practice addition and subtraction of integers, give each student in the class an Integers card. Students begin by choosing a number then adding all four numbers clockwise around the circle.

**Example:**

$$\begin{aligned} 1 + -5 &= -4 \\ -4 + -1 &= -5 \\ -5 + 6 &= 1 \end{aligned}$$

To increase the difficulty, have students experiment by working counterclockwise, beginning with a different number or using other operations.
