Suntex International Celebrates 30 Years of the 24[®] Game!

EASTON, PA—Exactly 30 years ago, successful inventor [Robert Sun](#) embarked on a journey to teach children the relationship between numbers through a game. The result of his efforts was the 24[®] Game, and it remains a student, educator and parent favorite to this day.

Sun found a way to make math fun and accessible to everyone: the answer is always 24! This approach alleviates a classic brand of math anxiety—getting the right answer—and instead puts the emphasis on the process and patterns, what Sun calls “the method behind the math.”

The 24[®] Game’s simple structure allows children to engage quickly, and almost immediately seek out higher levels of challenge. “Games allow students the freedom to make mistakes without being judged,” says Sun, who explains that the more students play, the more they engage in deep practice, which leads to fluency in, and permanent retention of, critical math skills.

In 1988, Sun set out to encourage a new generation of thinkers. In 2018, this generation’s children will find the freedom to explore math challenges with the 24[®] Game—and will find the freedom to discover their full potential in the process.
